Joseph Holman

AI Engineer

London, UK | 07734 258 202 | josepholman2k@tuta.com

jeh2k.com | linkedin.com/in/jeh2k

AI Engineer specialising in LLM applications, RAG systems and agentic architecture.

EXPERIENCE

TryHackMe

AI Engineer, Remote | April 2025 - Dec 2026

Founding AI team member, researching, building and deploying features aligned with the founders product vision.

Shipped an adaptive AI tutor using VM telemetry and LangGraph to interpret Linux/Windows sessions and decide when to offer hints or corrections; drove a 25% lift in question completion versus unassisted exercises.

Built AI feedback and personalised learning paths from telemetry and benchmarks; users were 15% more likely to attempt a follow-up exercise.

Deployed AI services from prototype to 200k+ MAU, with event-driven infrastructure on AWS EKS, MongoDB, Redis, Snowflake and Elasticsearch.

Shipped a recommendation engine combining embeddings, collaborative filtering and real-time data, with offline/online ranking evaluations to gate releases and flag regressions.

Designed LLM-as-judge and Ragas evaluations for safe A/B shadow rollouts; mentored an engineer transitioning into AI, scoping and delegating feature work.

bp

Software Engineer, London (Contract) | Dec 2023 - Jan 2025

Delivered bp s first production generative RAG system as a contractor, leading discovery with documentation and product owners to define retrieval quality.

Built a custom Kendra connector for internal repositories, tuned relevance, and exposed faithfulness, relevancy and context precision in MLflow for stakeholder review.

Extended the system to monitor API and CI/CD documentation against company standards; implemented CloudWatch synthetic UI monitoring and proactive alerts.

FutureNow

Software Engineer, London (Part-time) | Sep 2023 - Feb 2025

Built FastAPI services for an AI knowledge-management product, using LangChain to automate code documentation.

Re-architected a single-agent system into a LangGraph multi-agent design with PostgreSQL-backed state, improving scalability and response accuracy; built real-time AI evaluation pipelines.

TECHNICAL SKILLS

AI & ML: LLMs, RAG, LangChain, LangGraph, MCP, Generative AI, Prompt Engineering, PyTorch, TensorFlow, MLflow, Ragas, Hugging Face, scikit-learn, LoRA, Embeddings, NLP, NumPy

Data & infrastructure: Kafka, Elasticsearch, MongoDB, PostgreSQL, Redis, Pandas, Snowflake, Dramatiq, Kendra, Terraform, GitHub Actions, AWS Bedrock

Cloud & DevOps: AWS, Docker, Kubernetes, Helm, Jenkins, Grafana, Argo CD, CI/CD

Development: Python, FastAPI, Pydantic, JavaScript, REST APIs, SQL, asyncio, Linux, Bash, Pytest, Git, Agile

Observability: Grafana, Prometheus, OpenTelemetry, Sentry, CloudWatch, Structlog, ELK

EDUCATION

BSc Computer Science & Artificial Intelligence

University of Sussex | 2023 | First Class Honours (1:1)
